The iSy® Implant system – attractive implant sets offer even more options

iSy® is the inexpensive quality system from CAMLOG. It is slim and flexible, as well as being convincing in practice through easy handling, an efficient workflow and very economical prices. As of September 1, 2015, CAMLOG has extended the iSy® Implant system and thus complies with the requests of many users wishing to use the iSy® Implants in even more cases.

The 7.3 mm short iSy® Implants have been added to the product range. These are suitable for cases with limited bone volume and extend the indication spectrum of the system. Also new are the Esthomic® gingiva formers, which can be screwed directly in the implant, as well as the option of impression taking at the implant level through open and closed impression posts, plus numerous prosthetic components and instruments.

The new iSy® Esthomic® abutments allow esthetically cemented reconstructions. Their emergence profile is congruent in shape with the Esthomic® gingiva former and impression posts, open and closed tray. At the same time, the manufacturer has also released the iSy® Implant base for final restorations. These extensions give the treatment team even more options – whilst staying true to the original iSy® concept and its benefits of simplicity and efficiency.

The concept of the iSy® Implant system is based on implant sets which not only include one or four implants, but also valuable additional components. This comprises the iSy® Implant bases, which are pre-mounted in the implant, a single patient form drill, gingiva formers and multifunctional caps for scanning, impression taking and temporary restorations. The gingiva formers and multifunctional caps are made of PEEK and are simply mounted on the implant base.

The iSy® Implant sets are available at surprisingly reasonable prices. Add to this, the exceptional manufacturing quality and the excellent service of CAMLOG.

Further information on the iSy Implant system is available on the web at www.isy-implant.com

iSy® and Esthomic® are registered trademarks of CAMLOG Biotechnologies AG, Basel, Switzerland.
